## SPECIAL GLADIOLUS COLLECTIONS

High Grade, Large Size, True to Name, Treated Bulbs

At these postpaid prices they deserve a place in your garden. We welcome comparison, price and quality.

These collections were so popular last year, we are offering again sets assembled according to quantities as listed in unit price. If preferred we will at the dozen prices, include a larger number of GRADED sizes giving a much longer blooming period. Each variety labeled and packed in our ventilated cellophane package. Marked garden stakes included.

Key: Letters in first column represent the approximate time required to bloom large bulbs planted in May, with Medium and small bulbs requiring more time.

E, 60-70; EM, 70-80; M, 80-90; LM, 90-100; L over 100 days.

Figure following names indicates rank in popularity according to 1936 symposium compiled by the American Gladiolus Society. AND we are growing the FIRST TWENTY-FIVE. We are attempting to grow only the best of the better originations and may have to keep stepping to keep apace with coming introductions of superior merit.

NOTE: Prices of different sizes and quantities other than the unit price will be governed by following schedule as long as we have the stocks. Large bulbs are 1¼ inches and over, Medium ¾ to 1¼ inches, Small ⅜ to ¾ inches diameter.

Our latch string hangs out at No. 23807 Hedgewood Avenue, located just off of Route No. 20 at Clague Road Dover Center and ten miles west from downtown Cleveland, and 1 mile east of No. 252 from the south. Growing the BEST of GLADS is our specialty and in our fields you will find many of the worthwhile newer ones and can compare and select your favorites. Last season our GLAD rows were over 16,000 feet in length and the largest part was protected against drought by 1,000 feet of overhead Skinner irrigation, insuring fine healthy bulbs full of pep and vigor.

1937

# GLADIOLUS

America's Most  
Popular Flower

Tel. WESTlake 407J1

## THANKS "GLAD" FRIENDS

We wish to express our appreciation to those who by their patronage helped us to place this humble list of SELECT GLADS in your hands, the choicest varieties from the best originators all over the world. We have had so many commendations on our arrangement of catalog that we are again using the alphabetical color classifications, together with blooming periods and Popularity choices indicated.

"It costs no more to grow the BEST" is our axiom and it is certainly with a great amount of satisfaction when you see the fine blooms.

## CULTIVATION

In addition to their beauty, GLADIOLUS have many qualities to recommend them to the Amateur, low cost, ease of culture, general freedom from disease and bugs, (Thrips Excepted) and the simplicity with which they can be carried over from year to year and the length of the blooming season. Successive plantings from early in May to July will produce a glorious riot of colors from mid-July to October.

These beautiful spectacular GLADS are not particular as to soil requirements (Heavy soils tend to produce stronger coloring) but they do demand sunshine and plenty of water. Plant in the open spacing 4 to 8 inches apart (wider spacing will often reward with larger bloom) 4 inches deep in rows 24 inches or over apart. Water heavily at least once a week, making sure that the soil is wet down at least 6 inches. When the flower spike appears, water more frequently, keep well cultivated feed occasionally with a well balanced fertilizer (4-12-4) and your success is assured. Any extra effort will be justly rewarded with that much better blooms.

Cut spikes so that 4 leaves remain on the plant to give the bulbs an opportunity to mature for the following year. Bulbs are greatly weakened by leaving blooms on to go to seed.

Our GLAD bulbs are all treated against Thrip which might have escaped from the fields with Corrosive Sublimate (1-1000) solution, 1 oz. to 7½ Gallons water, soaking 7 hours in non-metallic container. (Equal amount of Ammonium Chloride mixed with Corrosive Sublimate will cause it to dissolve rapidly in cold water and is very inexpensive).

## SPRAY YOUR "GLADS"

Even though your blubs may be free of Thrips when planted, your neighbors (even distant) may not be, these fellows travel long distances quickly. So by all means spray at least once a week from the time the GLADS are a few inches high. We recommend ROTOX as the most efficient spray as recommended by many of the largest growers. ROTOX is a Penetrol Rotonone spray which though deadly to humans is deadly poison to insects. Write the ROTOX Co., 813 Yale St., East Williston, N. Y. for literature or send 35c for trial oz. bottle.

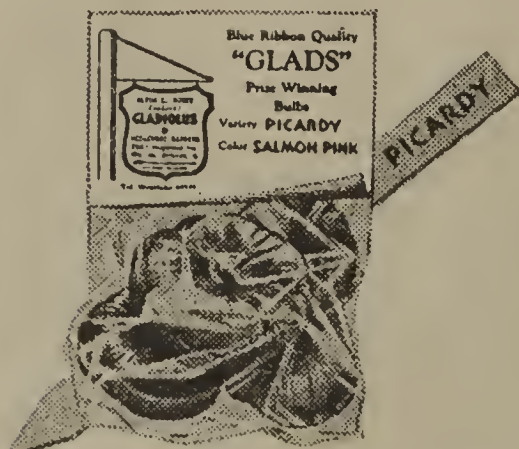

## OUR "GLADS"

Continuing our practice of encouraging growing of GLADS by name, we are packaging bulbs in units with a minimum of 25c, in ventilated cellophane which permits examination. With each unit a Garden stake marked with variety name included.

Single items amounting to \$1.00 will include a all metal stake with metal tag permanently marked with variety name.

We'll be Happy to receive your GLAD order with the assurance you will be more than satisfied with the results. Our appreciation will be shown by the inclusion of some extras which in our judgement are superior to those ordered.

\$2.00 orders will be delivered prepaid, under that please remit 15c to cover cost of handling and postage.

Picardy Special  
Graded Sizes - 40 Bulbs \$1.00

THE GLAD GROWER, A monthly magazine started last year giving a lot of GLADIOLUS information deserves your interest, price \$1.00 a year. Send to Mr. C. W. Brown, Ashland, Massachusetts or to Mr. H. J. Nitchman, Arlington, Ohio, your subscription, or ask for sample copy.
